

Low-Serum Media Supplement Kits

Get all the performance without the extra costs

Fetal bovine serum (FBS) is the well-known cell culture additive. However, this chemically undefined product is economically and ethically expensive. In contrast, low-serum media supplements are a much more defined, reliable and wallet friendly choice.

Weigh the benefits for yourself!

Fetal Bovine Serum

- Traditional Practice

Low-Serum Media Supplements

- ✓ Cost-effective
- ✓ Greater control over cellular environment
- ✓ More consistent performance
- ✓ Less batch-to-batch variation
- ✓ Lower ethical impact
- ✓ Improved experimental reliability

Simply add the supplements to the basal media and you're ready to go!!

abm offers low-serum media supplement kits for the following cell types:

Adipocytes (TM073)

Keratinocytes (TM040)

Preadipocytes (TM048)

Bronchial Epithelial (TM044)

Mammary Epithelial (TM043)

Skeletal Muscle (TM049)

Endothelial (TM042)

Melanocytes (TM047)

Small Airway Epithelial (TM045)

Fibroblasts (TM046)

Myocytes (TM072)

Smooth Muscle (TM041)
